

Question 1

CS 540 HPC Review

Q1 What factors can affect speedup?

Answer Summary

Answer options		"too much sequential code"		"insufficient problem set"		"wrong programming language"		"too much caffeine"
Is answer correct?	 <input type="checkbox"/>		 <input type="checkbox"/>					

Q2 Efficiency can be seen as the average speedup per processor

Answer Summary

Answer options		"True"		"False"				
Is answer correct?	 <input type="checkbox"/>							

Q3 Parallel computing always yields performance gains.

Answer Summary

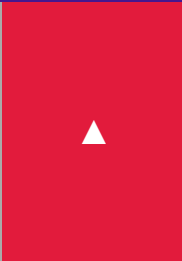

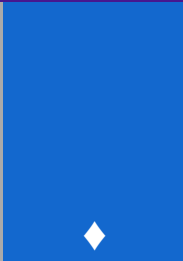

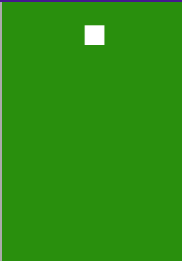

Answer options		"True"		"False"				
----------------	---	--------	---	---------	---	--	---	--

Question 1

Is answer correct?				
--------------------	---	--	--	--

Q4 A basic formula for calculating speedup is:

Answer Summary

Answer options		"single processor run / # of processors"		"# of processors / single processor run"		"# of processors / multiple processor runs"		"multiple processor runs / # of processors"
Is answer correct?								

Q5 OpenMP is an API that provides a portable, scalable model for non-shared memory

Answer Summary

Answer options		"True"		"False"				
Is answer correct?								

Q6 What languages does OpenMP support?

Answer Summary

Question 1

Answer options	 "C"	 "C++"	 "Fortran"	 "Python"
Is answer correct?	 <input type="checkbox"/>	 <input type="checkbox"/>	 <input type="checkbox"/>	

Q7 OpenMP is designed for massive distributed parallel architectures.

Answer Summary

Answer options	 "True"	 "False"		
Is answer correct?		 <input type="checkbox"/>		

Q8 What are the 3 API components of OpenMP?

Answer Summary

Answer options	 "Compiler Directives"	 "Runtime Libraries"	 "Multiple processors"	 "Environment Variables"
Is answer correct?	 <input type="checkbox"/>	 <input type="checkbox"/>		 <input type="checkbox"/>

Q9 OpenMP is responsible for race conditions and deadlocks.

Answer Summary

Question 1

Answer options		"True"		"False"				
Is answer correct?	✗		✓ <input type="checkbox"/>					

Q10 OpenMP is designed for _____ processor computers

Answer Summary

Answer options		"single"		"multiple"		"distributed"		
Is answer correct?	✗		✓ <input type="checkbox"/>		✗			

Q11 #pragma is an example of _____ in OpenMP

Answer Summary

Answer options		"Compiler Directive"		"Runtime Library"		"System call"		"Forking a child"
Is answer correct?	✓ <input type="checkbox"/>		✗		✗		✗	

Q12 When compiling an OpenMP project what compiler flag is needed?

Answer Summary

Question 1

Answer options		"-fopenmp"		"-o foo.bar"		"-jar"		"argv[0]"
Is answer correct?								

Q13 What does a thread do when it comes across a PARALLEL directive?

Answer Summary

Answer options		"it fails"		"creates a team of threads, and becomes master thread"		"creates a team of threads, and joins the team of threads"		"results in a segmentation fault"
Is answer correct?								

Q14 omp_get_num_threads() is an example of a _____?

Answer Summary

Answer options		"Compiler Directive"		"Runtime Library Function"		"Fortran Routine"		"Standard C++ Library Function"
Is answer correct?								

Question 1

Q15		What does #pragma omp parallel num_threads(24) do?						
Answer Summary								
Answer options		"modifies the default number of threads to 24"		"creates 24 threads"		"sets the number of threads in a parallel region"		"terminates 24 running threads"
Is answer correct?	 <input type="checkbox"/>				 <input type="checkbox"/>			

Q16		What is the definition of taxonomy?						
Answer Summary								
Answer options		"a field of science responsible for classification"		"an algorithm for detecting tax fraud"		"A term used exclusively by the IRS"		"the field of science responsible for machine learning"
Is answer correct?	 <input type="checkbox"/>							

Question 1

Q17	Flynn's Taxonomy consists of how many classifications?			
-----	--	--	--	--

Answer Summary

Answer options		"1"		"2"		"4"		"3"
Is answer correct?	✗		✗		✓ <input type="checkbox"/>		✗	

Q18	The SISD taxonomy stands for:			
-----	-------------------------------	--	--	--

Answer Summary

Answer options		"Single Instruction Single Data"		"Single Instruction Single Drive"		"Single Income Single Data"		
Is answer correct?	✓ <input type="checkbox"/>		✗		✗			

Q19	Older PC's with a single core processor are capable of parallel processing?			
-----	---	--	--	--

Answer Summary

Answer options		"True"		"False"				
Is answer correct?	✗		✓ <input type="checkbox"/>					

Question 1

Q20 All modern pc's/laptops fall under the _____ taxonomy

Answer Summary

Answer options		"SIMD (Single Instruction Multiple Data)"		"SISD (Single Instruction Single Data)"		"MIMD (Multiple Instruction Multiple Data)"		"MISD (Multiple Instruction Single Data)"
Is answer correct?								

Q21 Todays supercomputer fall under the MIMD category?

Answer Summary

Answer options		"True"		"False"				
Is answer correct?								

Q22 A standalone computer that consists of multiple CPU's, memory, network interfaces is a _____ ?

Answer Summary

Question 1

Answer options		"Node"		"Task"		"Loaner"		"Network Router"
Is answer correct?		<input type="checkbox"/>						

Q23 describes a computer architecture where all cores have direct access to common physical memory.

Answer Summary

Answer options		"Shared Memory"		"Distributed Memory"		"Network Attached Storage"		"Supercomputer"
Is answer correct?		<input type="checkbox"/>						

Q24 memory that is not common and must use communications to access memory.

Answer Summary

Answer options		"Distributed Memory"		"Shared Memory"		"OpenMP"		"Child process"
Is answer correct?		<input type="checkbox"/>						

Q25 A Uniform Memory Access (UMA) architecture has:

Answer Summary

Answer options		"identical processors"		"equal access to memory"		"handles race conditions"		"network accessible memory"
----------------	---	------------------------	--	--------------------------	---	---------------------------	---	-----------------------------

Question 1

Is answer correct?	✓ <input type="checkbox"/>	✓ <input type="checkbox"/>	x	x
--------------------	----------------------------	----------------------------	---	---
